Chemistry and Physics of Lipids, 56 (1990) 231—233
Elsevier Scientific Publishers Ireland Ltd.

Subject Index

Volume 56 (1990)

acyl chain length, cholesterol, phospholipids, calorimetry, 217
adult respiratory distress syndrome, pulmonary surfactants, surfactant inhibition, surfactant apoproteins, dynamic surface tension lowering, 185
affinity chromatography, phosphatidylinositol, myo-inositol, phosphonate analogues, phospholipase C, 159
aldehyde formation, linoleic acid hydroperoxide, autoxidation, 209
amidothiophosphates, glycophospholipids, sterols, phosphorylation, hexaethyltriamide of phosphorous acid, phosphagen, 21
antioxidant reactivity, vitamin E, vitamin C, ESR, micellar effect, 73
atrazine, cardiolipin, phosphatidylserine, fusion, turbidity, fluorescence polarization, 101
autoxidation, linoleic acid hydroperoxide, aldehyde formation, 209
azathia-analogues, phospholipid synthesis, platelet activating factor analogues, ether lipids, chiral sulfur compound, 175

blackcurrant seed oil, ^{13}C-NMR spectra, evening primrose seed oil, borage seed oil, oil of javanicus, γ-linolenic acid, distribution between α and β positions, 201
borage seed oil, ^{13}C-NMR spectra, evening primrose seed oil, blackcurrant seed oil, oil of javanicus, γ-linolenic acid, distribution between α and β positions, 201

c.m.c., gangliosides, ganglioside derivatives, ganglioside aggregates, micelles, light scattering, surface tension, 49
calorimetry, cholesterol, phospholipids, acyl chain length, 217
cardiolipin, atrazine, phosphatidylserine, fusion, turbidity, fluorescence polarization, 101
chain packing, lipids, chain rotation, sub-cell, X-ray diffraction, 123
chain rotation, lipids, chain packing, sub-cell, X-ray diffraction, 123
changes in chemical shifts with patterns of unsaturation, ^{13}C-NMR spectra, glycerol triesters, chemical in α and β chains, 195
charge-transfer interaction, phospholipid liposome, phenosafranin dye, thermodynamics, photovoltage, electrode kinetics, 81
chemical in α and β chains, ^{13}C-NMR spectra, glycerol triesters, changes in chemical shifts with patterns of unsaturation, 195
chiral sulfur compound, phospholipid synthesis, platelet activating factor analogues, azathia-analogues, ether lipids, 175
cholesterol, membrane, phospholipid, exchange, fluorescence, 37
cholesterol, phospholipids, acyl chain length, calorimetry, 217
cholesterol, vesicles, solubilization, octylglucoside, diglycerol hexadecylether, turbidity, 109
cholesterylester transfer, phospholipid transfer proteins, lipid transfer proteins, 1
cis-unsaturated fatty acid, palmitoleic acid, polymorphic transformation, pressure effect, DSC, high-pressure DTA, 59
conjuctive reaction, fatty acids, polyenoic, synthesis, metabolism, function, 65

diacylglycerol, FTIR, fluorescence, phosphatidyl- ethanolamine, phase transition, hydration, 149
diglycerol hexadecylether, vesicles, solubilization, octylglucoside, cholesterol, turbidity, 109
distribution between α and β positions, ^{13}C-NMR spectra, evening primrose seed oil, borage seed oil, blackcurrant seed oil, oil of javanicus, γ-linolenic acid, 201
docosahexaenoic acid, ^{1}H-NMR spectra, ^{13}C-NMR spectra, *n*-3 esters, α-linolenate, eicosapentaenoic acid, 227
DSC, *cis*-unsaturated fatty acid, palmitoleic acid, polymorphic transformation, pressure effect, high-pressure DTA, 59
dynamic surface tension lowering, pulmonary surfactants, surfactant inhibition, surfactant apoproteins, adult respiratory distress syndrome, 185

eicosapentaenoic acid, ^{1}H-NMR spectra, ^{13}C-NMR spectra, *n*-3 esters, α-linolenate, docosahexaenoic acid, 227
electrode kinetics, phospholipid liposome, phenosafranin dye, charge-transfer interaction, thermodynamics, photovoltage, 81
ESR, antioxidant reactivity, vitamin E, vitamin C, micellar effect, 73
ether lipids, fluorescence decay, fluorescent phospholipid, membrane heterogeneity, non-perturbing membrane probes, 27
ether lipids, phospholipid synthesis, platelet activating factor analogues, azathia-analogues, chiral sulfur compound, 175

evening primrose seed oil, ^{13}C-NMR spectra, borage seed oil, blackcurrant seed oil, oil of javanicus, γ-linolenic acid, distribution between α and β positions, 201
exchange, cholesterol, membrane, phospholipid, fluorescence, 37

fatty acids, polyenoic, synthesis, conjuctive reaction, metabolism, function, 65
Fe-ascorbate peroxidation, phosphatidic acid, pyrophosphate, liposomes, 91
fluorescence, cholesterol, membrane, phospholipid, exchange, 37
fluorescence, FTIR, phosphatidylethanolamine, diacylglycerol, phase transition, hydration, 149
fluorescence decay, ether lipids, fluorescent phospholipid, membrane heterogeneity, non-perturbing membrane probes, 27
fluorescence polarization, atrazine, cardiolipin, phosphatidylserine, fusion, turbidity, 101
fluorescent phospholipid, ether lipids, fluorescence decay, membrane heterogeneity, non-perturbing membrane probes, 27
FTIR, fluorescence, phosphatidylethanolamine, diacylglycerol, phase transition, hydration, 149
function, fatty acids, polyenoic, synthesis, conjuctive reaction, metabolism, 65
fusion, atrazine, cardiolipin, phosphatidylserine, turbidity, fluorescence polarization, 101

gangliosides, ganglioside derivatives, ganglioside aggregates, micelles, c.m.c., light scattering, surface tension, 49
ganglioside aggregates, gangliosides, ganglioside derivatives, micelles, c.m.c., light scattering, surface tension, 49
ganglioside derivatives, gangliosides, ganglioside aggregates, micelles, c.m.c., light scattering, surface tension, 49
glycerol triesters, ^{13}C-NMR spectra, chemical in α and β chains, changes in chemical shifts with patterns of unsaturation, 195
glycophospholipids, amidothiophosphates, sterols, phosphorylation, hexaethyltriamide of phosphorous acid, phosphagen, 21

halophilic bacteria, phosphatidylethanolamine, phosphatidylglycerol, sodium chloride, hexagonal-II, lamellar, 135
hexaethyltriamide of phosphorous acid, glycophospholipids, amidothiophosphates, sterols, phosphorylation, phosphagen, 21
hexagonal-II, phosphatidylethanolamine, phosphatidyl- glycerol, sodium chloride, halophilic bacteria, lamellar, 135
high-pressure DTA, *cis*-unsaturated fatty acid, palmitoleic acid, polymorphic transformation, pressure effect, DSC, 59
hydration, FTIR, fluorescence, phosphatidylethanolamine, diacylglycerol, phase transition, 149

lamellar, phosphatidylethanolamine, phosphatidylglycerol, sodium chloride, halophilic bacteria, hexagonal-II, 135
light scattering, gangliosides, ganglioside derivatives, ganglioside aggregates, micelles, c.m.c., surface tension, 49
linoleic acid hydroperoxide, aldehyde formation, autoxidation, 209
α-linolenate, ^{1}H-NMR spectra, ^{13}C-NMR spectra, *n*-3 esters, eicosapentaenoic acid, docosahexaenoic acid, 227
γ-linolenic acid, ^{13}C-NMR spectra, evening primrose seed oil, borage seed oil, blackcurrant seed oil, oil of javanicus, distribution between α and β positions, 201
lipids, chain packing, chain rotation, sub-cell, X-ray diffraction, 123
lipid transfer proteins, phospholipid transfer proteins, cholesterylester transfer, 1
liposomes, Fe-ascorbate peroxidation, phosphatidic acid, pyrophosphate, 91

mass spectra, synthetic lubricants, PE esters, TMP esters, ^{1}H-NMR, ^{13}C-NMR, 169
membrane, cholesterol, phospholipid, exchange, fluorescence, 37
membrane heterogeneity, ether lipids, fluorescence decay, fluorescent phospholipid, non-perturbing membrane probes, 27
metabolism, fatty acids, polyenoic, synthesis, conjuctive reaction, function, 65
methyl thialaurates, methyl thiasterates, thia fatty acid esters, Raman spectroscopy, 223
methyl thiasterates, methyl thialaurates, thia fatty acid esters, Raman spectroscopy, 223
micellar effect, antioxidant reactivity, vitamin E, vitamin C, ESR, 73
micelles, gangliosides, ganglioside derivatives, ganglioside aggregates, c.m.c., light scattering, surface tension, 49
myo-inositol, phosphatidylinositol, phosphonate analogues, phospholipase C, affinity chromatography, 159

n-3 esters, ^{1}H-NMR spectra, ^{13}C-NMR spectra, α-linolenate, eicosapentaenoic acid, docosahexaenoic acid, 227
^{13}C-NMR, synthetic lubricants, PE esters, TMP esters, ^{1}H-NMR, mass spectra, 169
^{13}C-NMR spectra, ^{1}H-NMR spectra, *n*-3 esters, α-linolenate, eicosapentaenoic acid, docosahexaenoic acid, 227
^{13}C-NMR spectra, evening primrose seed oil, borage seed oil, blackcurrant seed oil, oil of javanicus, γ-linolenic acid, distribution between α and β positions, 201
^{13}C-NMR spectra, glycerol triesters, chemical in α and β chains, changes in chemical shifts with patterns of unsaturation, 195
^{1}H-NMR spectra, ^{13}C-NMR spectra, *n*-3 esters, α-linolenate, eicosapentaenoic acid, docosahexaenoic acid, 227
^{1}H-NMR, synthetic lubricants, PE esters, TMP esters, mass spectra, ^{13}C-NMR, 169
non-perturbing membrane probes, ether lipids, fluorescence decay, fluorescent phospholipid, membrane heterogeneity, 27

octylglucoside, vesicles, solubilization, cholesterol, diglycerol hexadecylether, turbidity, 109
oil of javanicus, ^{13}C-NMR spectra, evening primrose seed oil, borage seed oil, blackcurrant seed oil, γ-linolenic acid, distribution between α and β positions, 201

palmitoleic acid, *cis*-unsaturated fatty acid, polymorphic transformation, pressure effect, DSC, high-pressure DTA, 59
PE esters, synthetic lubricants, TMP esters, ^{1}H-NMR, mass spectra, ^{13}C-NMR, 169
phase transition, FTIR, fluorescence, phosphatidylethanolamine, diacylglycerol, hydration, 149
phenosafranin dye, phospholipid liposome, charge-transfer interaction, thermodynamics, photovoltage, electrode kinetics, 81
phosphagen, glycophospholipids, amidothiophosphates, sterols, phosphorylation, hexaethyltriamide of phosphorous acid, 21
phosphatidic acid, Fe-ascorbate peroxidation, pyrophosphate, liposomes, 91
phosphatidylethanolamine, phosphatidylglycerol, sodium chloride, halophilic bacteria, hexagonal-II, lamellar, 135
phosphatidylethanolamine, FTIR, fluorescence, diacylglycerol, phase transition, hydration, 149
phosphatidylglycerol, phosphatidylethanolamine, sodium chloride, halophilic bacteria, hexagonal-II, lamellar, 135
phosphatidylinositol, myo-inositol, phosphonate analogues, phospholipase C, affinity chromatography, 159
phosphatidylserine, atrazine, cardiolipin, fusion, turbidity, fluorescence polarization, 101
phospholipase C, phosphatidylinositol, myo-inositol, phosphonate analogues, affinity chromatography, 159
phospholipid, cholesterol, membrane, exchange, fluorescence, 37
phospholipids, cholesterol, acyl chain length, calorimetry, 217
phospholipid liposome, phenosafranin dye, charge-transfer interaction, thermodynamics, photovoltage, electrode kinetics, 81
phospholipid synthesis, platelet activating factor analogues, azathia-analogues, ether lipids, chiral sulfur compound, 175
phospholipid transfer proteins, lipid transfer proteins, cholesterylester transfer, 1
phosphonate analogues, phosphatidylinositol, myo-inositol, phospholipase C, affinity chromatography, 159
phosphorylation, glycophospholipids, amidothiophosphates, sterols, hexaethyltriamide of phosphorous acid, phosphagen, 21
photovoltage, phospholipid liposome, phenosafranin dye, charge-transfer interaction, thermodynamics, electrode kinetics, 81
platelet activating factor analogues, phospholipid synthesis, azathia-analogues, ether lipids, chiral sulfur compound, 175
polyenoic, fatty acids, synthesis, conjuctive reaction, metabolism, function, 65
polymorphic transformation, *cis*-unsaturated fatty acid, palmitoleic acid, pressure effect, DSC, high-pressure DTA, 59
pressure effect, *cis*-unsaturated fatty acid, palmitoleic acid, polymorphic transformation, DSC, high-pressure DTA, 59
pulmonary surfactants, surfactant inhibition, surfactant apoproteins, adult respiratory distress syndrome, dynamic surface tension lowering, 185
pyrophosphate, Fe-ascorbate peroxidation, phosphatidic acid, liposomes, 91

Raman spectroscopy, methyl thialaurates, methyl thiasterates, thia fatty acid esters, 223

sodium chloride, phosphatidylethanolamine, phosphatidylglycerol, halophilic bacteria, hexagonal-II, lamellar, 135
solubilization, vesicles, octylglucoside, cholesterol, diglycerol hexadecylether, turbidity, 109
sterols, glycophospholipids, amidothiophosphates, phosphorylation, hexaethyltriamide of phosphorous acid, phosphagen, 21
sub-cell, lipids, chain packing, chain rotation, X-ray diffraction, 123
surface tension, gangliosides, ganglioside derivatives, ganglioside aggregates, micelles, c.m.c., light scattering, 49
surfactant apoproteins, pulmonary surfactants, surfactant inhibition, adult respiratory distress syndrome, dynamic surface tension lowering, 185
surfactant inhibition, pulmonary surfactants, surfactant apoproteins, adult respiratory distress syndrome, dynamic surface tension lowering, 185
synthesis, fatty acids, polyenoic, conjuctive reaction, metabolism, function, 65
synthetic lubricants, PE esters, TMP esters, ^{1}H-NMR, mass spectra, ^{13}C-NMR, 169

thermodynamics, phospholipid liposome, phenosafranin dye, charge-transfer interaction, photovoltage, electrode kinetics, 81
thia fatty acid esters, methyl thialaurates, methyl thiasterates, Raman spectroscopy, 223
TMP esters, synthetic lubricants, PE esters, ^{1}H-NMR, mass spectra, ^{13}C-NMR, 169
turbidity, atrazine, cardiolipin, phosphatidylserine, fusion, fluorescence polarization, 101
turbidity, vesicles, solubilization, octylglucoside, cholesterol, diglycerol hexadecylether, 109

vesicles, solubilization, octylglucoside, cholesterol, diglycerol hexadecylether, turbidity, 109
vitamin C, antioxidant reactivity, vitamin E, ESR, micellar effect, 73
vitamin E, antioxidant reactivity, vitamin C, ESR, micellar effect, 73

X-ray diffraction, lipids, chain packing, chain rotation, subcell, 123

Chemistry and Physics of Lipids, 56 (1990) 235
